Education

Louisiana State University

Dec 2026

Bachelor of Science in Computer Science | Baton Rouge, LA | GPA: 3.55

Bachelor of Science in Mathematics | Baton Rouge, LA | GPA: 3.55

Skills

Programming Languages: Python, JavaScript/TypeScript, SQL, Bash, C++

Frameworks & Technologies: PyTorch, FastAPI, Django, React, Git, Docker, Jira, AWS

Data/Infrastructure: PostgreSQL, Redis, Apache Spark, Databricks, Kubernetes

Experience

SOC Analyst

Aug 2025 – Present

Louisiana State University | Baton Rouge, LA

- Monitor, triage, and investigate security alerts in a SOAR platform using structured playbooks to validate detections, assess severity/impact, and drive timely response actions.
- Correlate logs in Splunk to identify Indicators of Compromise (IPs, domains, hashes), build event timelines, and document investigative findings with clear evidence trails.
- Create thorough case notes and escalation summaries to support handoffs, improve analyst alignment, and maintain consistent incident documentation standards.

Software Engineering Intern

May 2025 – Aug 2025

Blue Origin | Kent, WA

- Automated mapping and comparison of configuration classes across legacy and modern ingestion frameworks to accelerate migration readiness for large-scale datasets.
- Built translation scripts and validation tooling to convert legacy ingestion configs into the new framework, standardizing settings and reducing manual migration effort.
- Designed repeatable test and data-validation workflows to compare outputs between pipelines, catching regressions early and improving confidence in production cutovers.
- Produced clear developer documentation and usage examples to enable adoption by engineers migrating additional tables and data sources.

Data Science Intern

May 2024 – Aug 2024

BASF Corporation | Geismar, LA

- Architected and implemented a scalable streaming data pipeline processing live feeds from 25+ sensors, enabling lifecycle-wide monitoring and analysis.
- Developed and deployed a Streamlit web application for real-time visualization and monitoring in the DNT Unit (second-largest facility unit), improving operational visibility.
- Integrated machine learning models to predict sensor failures and surface early risk signals for engineering review.
- Implemented responsive dashboards and trend views that reduced time-to-insight, helping engineers interpret complex live signals faster.

Undergraduate Researcher – DeVision

May 2023 – May 2024

LSU Mathematics Department | Baton Rouge, LA

- Developed and trained CNN-based computer vision models for frog egg counting, improving accuracy and reducing manual counting time from days to minutes (99% accuracy).
- Implemented practical training improvements (data preprocessing, augmentation, validation checks) to improve generalization and robustness across image conditions.
- Optimized model training on departmental supercomputing resources to speed experiments and iterate on architectures efficiently.
- Delivered research results to academic and industry audiences, translating technical findings into clear outcomes and next steps.

Leadership / Organizations / Talks

LSU Vision Lab | Undergraduate Researcher

Aug 2025 – Present

Applied Cybersecurity Lab | Undergraduate Researcher

Aug 2024 – Present

National Society of Black Engineers | Member

Aug 2022 – Present

Residential Assistant | Azalea Hall

Aug 2023 – May 2025

7th TX-LA Mathematics Conference | Talk: Deep Learning for Frog Eggs Quantification

March 2024
